

Mining

Australia 3.0

Catalysing Ideas into collaborative action

INDUSTRY IS LOOKING FOR NEW ANSWERS. IS YOUR IDEA, TECHNOLOGY OR SOLUTION WHAT WE NEED?

If you are a great thinker with something to contribute to the future success of Australian mining... we want to hear from you.

This is your chance to get an industry, an economy and the nation backing your ideas.

CALL FOR DISRUPTIVE INNOVATION

Emerging and Cross-Industry Information and Communication Technology (ICT) for Transforming Mining

Australia 3.0 is selecting ideas to be pitched to a "Dragon's Den" of industry experts to test, stretch and debate the application of your ideas to their real-world situations.

The best ideas from the day will be endorsed by the expert group to a mature and pre-funded industry R&D process.

The Australian mining industry faces significant challenges over productivity and sustainability as they work decreasing ore grades in deeper mines, with higher input costs, regulation and environmental considerations.

It is expected that new technologies, or technologies from other industries, can be found that will deliver significant benefit.

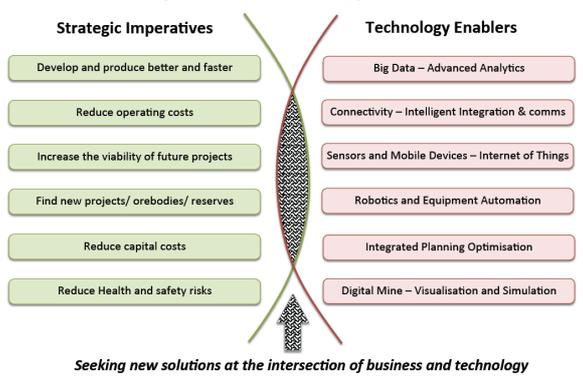

The Australia 3.0 process is designed to discover the best of those ideas, to strengthen them in the fire of collaborative expert opinion and then provide them with a fast-entry into the industry innovation adoption process.

The Australia 3.0 (Mining Stream) is running an innovation selection process that will allow new concepts - at any stage of development - to present an "angel investment style pitch" to an audience of mining industry innovation experts.

Your ideas will be tested, discussed, dissected and reconfigured by leaders in the field who understand the opportunities and the challenges. They will select ideas that are truly fresh, add the greatest value to current practice, and can be widely adopted in mining.

The group will discuss value, possible roadblocks, integrations and applications. They will select a small number of "winning entries" to recommend as input for deep study and adoption consideration by our government and industry partners.

Australia 3.0 is open to researchers, engineers, software developers, companies or individuals who think outside the square.
The best ideas will win.

Our Key Themes:

- Exploration and Development**
- Mining Productivity**
- Sustainability and Community**

APPLY BEFORE COB AUGUST 18th
www.australia30.com.au/mining
 You must be available to do your presentation at the Australia 3.0 forum in Melbourne on August 28th. See website for further information.
